

# STRAW ROCKETS

**VALENTINE**

## You'll need

- Straw
- Paper
- Tape
- Scissors
- Felt tip pens - optional

## Instructions

Cut out the rectangle shape, fold in half and seal the top and long side opposite the fold with tape. This is the rocket part of the straw rocket. It needs to fit loosely over the straw.

Decorate the plane with the plane image provided or draw your own.

Place the rocket on the end of the straw and blow down the straw. The rocket will shoot into the air!

## What's going on?

When you blow air down the straw it travels to the end and pushes its way out, taking the rocket with it as it moves. The harder you blow into the straw the more energy the air has and the further your rocket will fly!
